Overloading Array Subscription

Assume a list of names and corresponding phone numbers is available. Create a class named `phoneList`. The class should store the names and phone numbers however, to find a phone number it should be possible to use the names as indices.

Example:

```
phoneList myList;
```

```
myList.Insert("Ali", 12345);
```

```
myList.Insert("Mehmet",28973);
```

```
printf("The phone number of Ali is :", myList["Ali"]);
```
